

## Achieve Greater Impact, Reach, and Revenue Through Family Care in Schools

# TELEDENTISTRY IN SCHOOLS:

Increase community impact, new patient reach and revenue, by giving kids and their families the connection to needed oral health services through teledentistry.

## Oral Health Statistics

### Ages 5-9

According to the Center for Disease Control & Prevention, 13.2% of children in this age group had untreated dental caries in 2019<sup>1</sup>

### Ages 6-19

Ages 6-19 remain the most common age for developing caries<sup>2</sup>

### Ages 4-17

Tooth decay is 4x more common than asthma among adolescents aged 14-17 years<sup>3</sup>

## Preventable Issues. Major Consequences.

Lack of dental care impacts children more than many realize. Poor dental health causes several entirely preventable issues in children, including dental caries.<sup>3</sup>

### Nutrition

Proper nourishment suffers due to pain from dental discomfort.

### Sleep and Performance

Lack of sleep from dental pain means results in decreased focus and diminished performance in the classroom.

# 3x

Students are three times as likely to miss school when impacted by dental health issues.

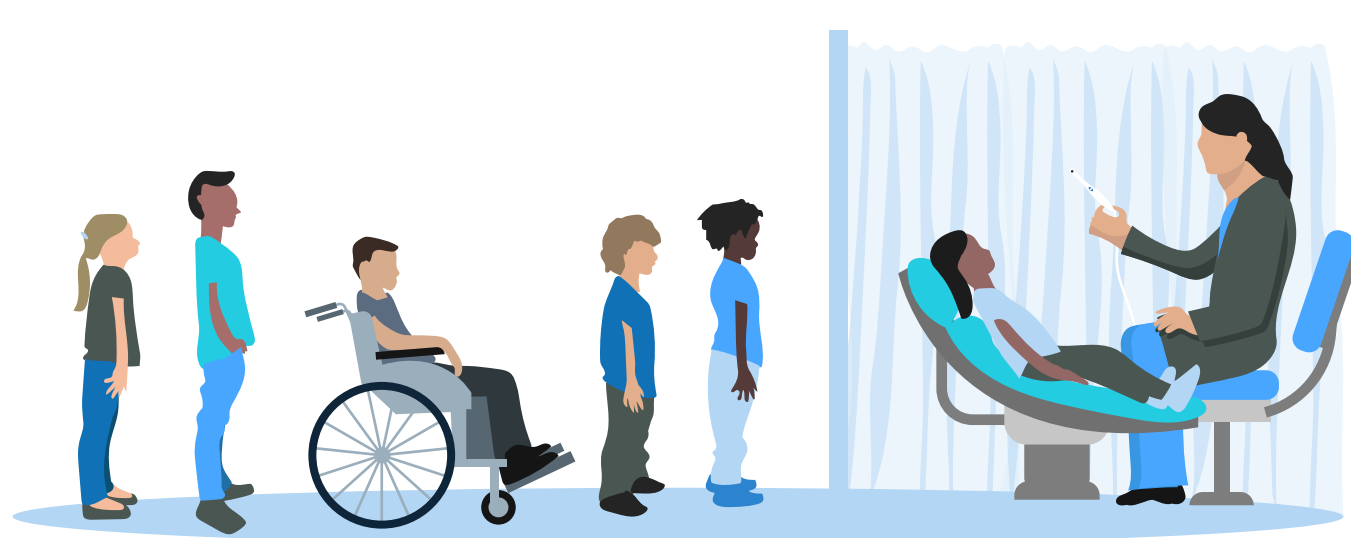

## Addressing Family Care at the School Level

Explore the benefits of teledentistry's versatility in dentistry:

### Access to Service

Children, families, and schools gain of access to an important enabler in academic growth and overall health.

### Cost-Effective Preventative Screenings

Patients who schedule a teledentistry visit **cost 10% less** to treat in 2018 than dental patients who did not use teledentistry.<sup>4</sup>

## Increased Program Reach

88% of dentists have identified teledentistry as being useful in improving access to oral health.<sup>5</sup>

## How It's Done

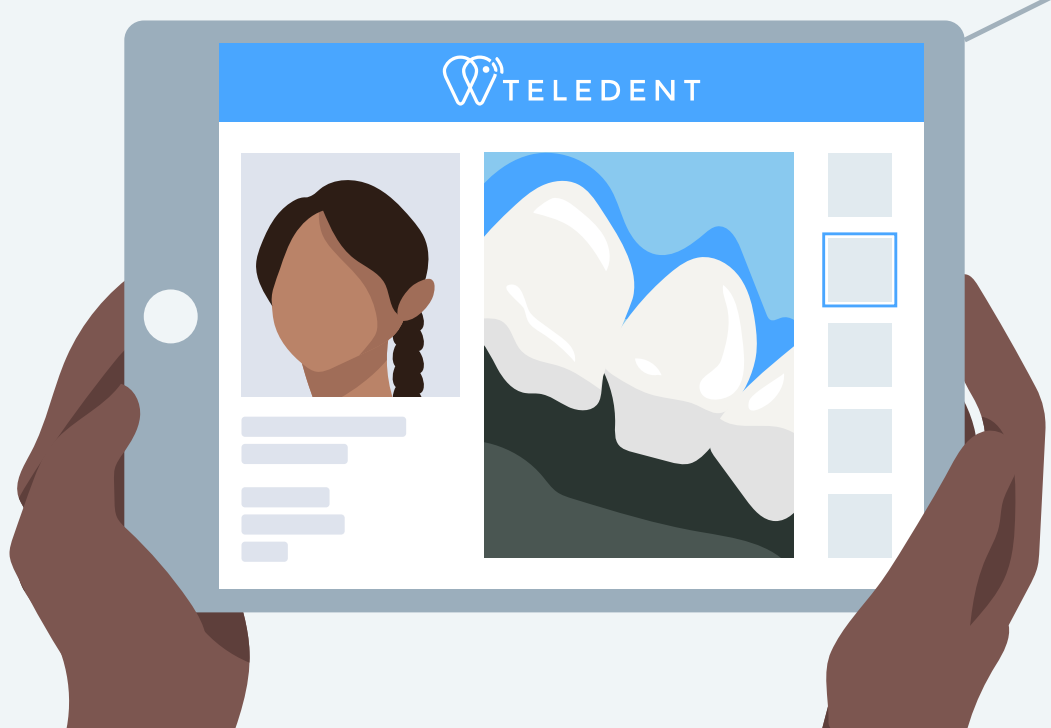

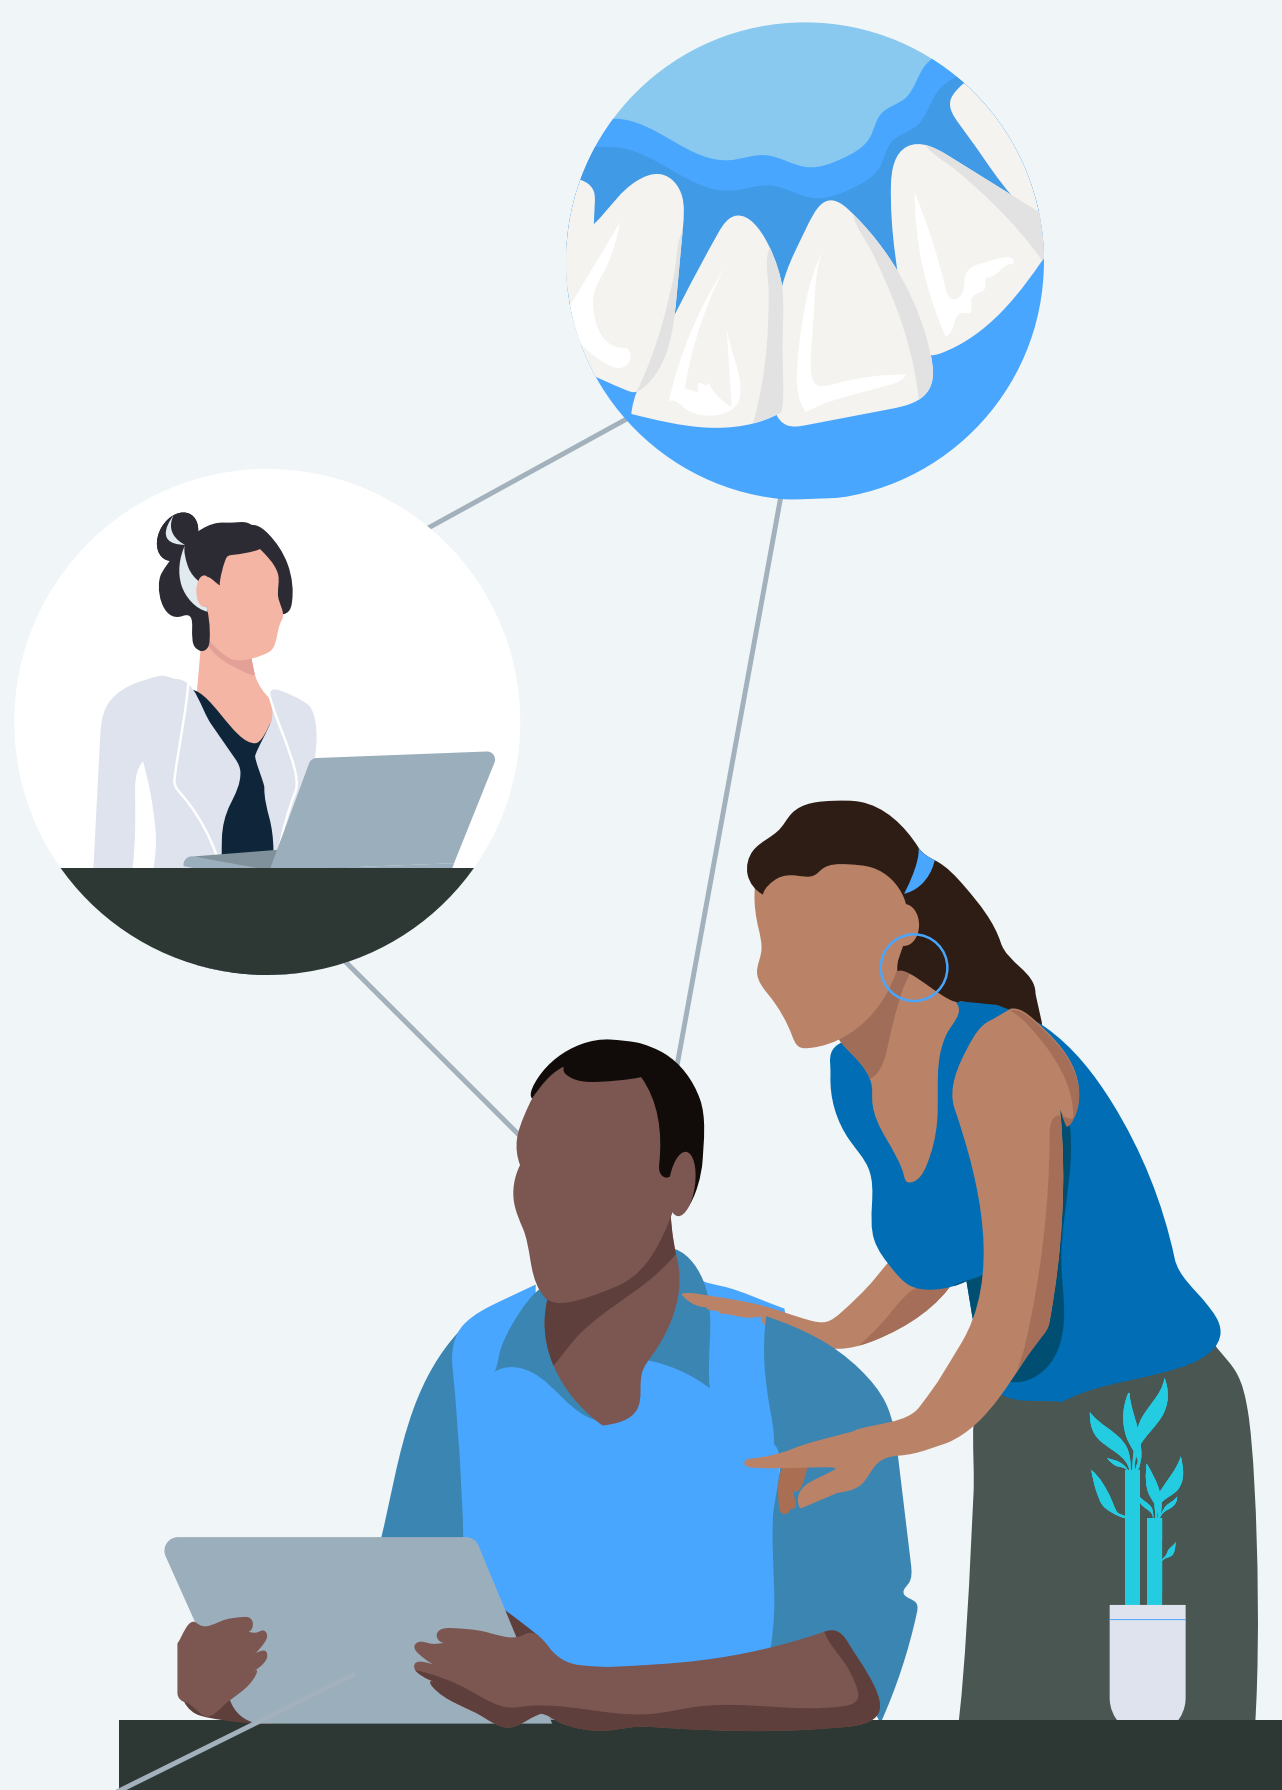

Teledentistry provides families with access to important oral health services, including:

### Photos & X-Rays

- Quickly capture intraoral photos and x-rays to educate patients, showcase urgency, and increase case acceptance.
- Maintain and share access to these images off-site to help providers see and diagnose damage and disease.

### Immediate Dental Consultations

- With asynchronous teledentistry, you can quickly and easily store and forward patient data while messaging parents and patients.
- Provide important clinical information to patients, their families, and other dental professionals any time, anywhere.

## The Result

### Efficient and Effective Family Care

Teledentistry helps make maintaining oral healthcare for families easier than ever.
