

Why Teledentistry?

Dental Care Conversations are Evolving

Remote Consultations

See patients in a way that's convenient for them while more efficient for you. Keep your patients connected to your practice even when they can't come into the practice. TeleDent enables video recordings, clinical image sharing, video snapshot capture, and more to make video consults clinically integrated and effective.

In-Office Teledentistry

Teledentistry doesn't just happen remotely or in real time. Hygienists can capture exam and patient data chair-side and share with the doctor for later review. Evaluate, treatment plan, case present...without needing to go chair-side. Adopting in-office teledentistry mitigates risks for patients and teams. And it means more efficient use of chair time when that counts the most.

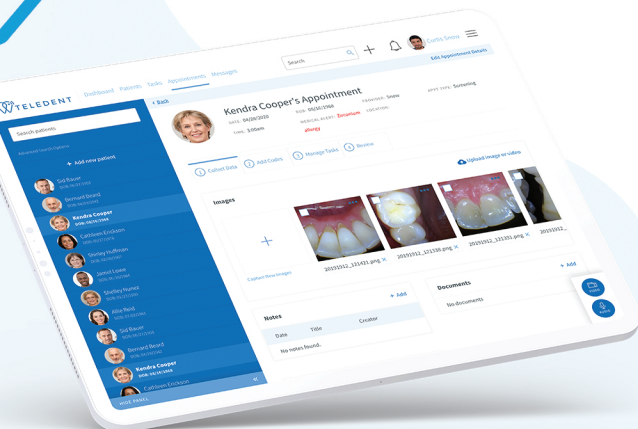

No Drop Referrals

A specialist can have a face-to-face live initial meeting with a patient while still in the GP's chair. The hand-off from GP to specialist with the right teledentistry platform happens in a single click. Then all clinical data is seamlessly shared, without email and communication hassles. Plus, when a teledentistry platform has flexible permission and roles, the GP can be kept automatically in the loop on the patient journey.

Centralized Virtual Location for Groups

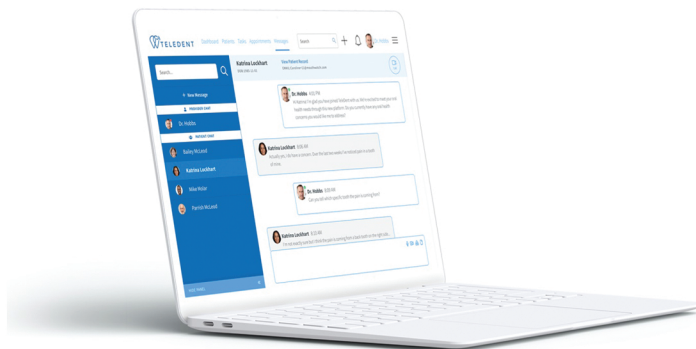

When specialists within a group can provide virtual consults or be in collaboration meetings via teledentistry, it means reduced travel time between locations. Group practice and DSOs can look further. What if teledentistry was seen as a virtual location, an on-call center, that screened, triaged and assigned patients to locations or teledentistry appointments? The right teledentistry platform opens the door to new efficiencies at scale by centralizing.

Teledentistry can be **so much more** than live video chat

Add telehealth value across the whole patient journey...

You and your team need to be able to connect with patients through virtual consultations...

A complete teledentistry solution enables virtual consults, and more.

Simplify and enhance the care you and your team provide by making teledentistry an integrated part of your clinical practice with:

- **Consolidated** records of patient communications
- **End-to-end secure** clinical file storage and sharing
- **Intuitive** clinical task, exam and team management
- **The ability to pivot easily** between asynch and synchronous communications
- **Flexible** mirroring of clinical and business structures in app
- **Training** and technical support resources

- Efficiency
- Safety
- Cost Savings
- Patient Experience
- Team Management
- Clinical Outcomes
- Referrals
- Collaboration
- Workflow
